

Advantage Aviation Technologies

ATR 42 and 72 Jet Pipe Repair

Advantage Aviation Technologies specializes in aircraft welding repairs, aircraft overhauls, and engineering repairs for aircraft components and subcomponents.

Due to extreme conditions, wear, and vibration the Jet Pipes can suffer brackets that will break off, cracks on the inside and outer skin damage.

AAT repairs this damage with state of the art welding techniques and patented procedures that not only repair the damage and cracks but deter further cracking in the repaired areas.

AAT has developed a new material approved by the FAA for the outer skins that will increase the life expectancy of this part far greater than when it was new! AAT also has repair procedures for pipes not requiring a complete skin replacement.

Florescent Penetrate Inspection processes are implemented as part of these repairs to insure the highest quality.

Part of the AAT repair is also the all important mounting geometry adjustments to insure that the mounting surface is aligned properly so upon re installation and operation, future damage does not occur due to improper mounting geometry.
